MOBILE ROAD SAFETY BARRIER

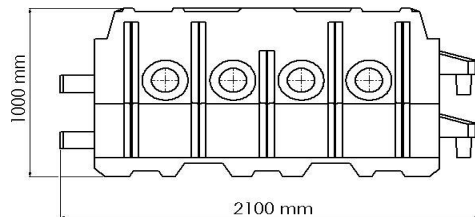

Our Patented Barrier has been proven as a cost-effective, efficient device for separation of traffic lanes, marking of detours and temporary routes, as well as physical protection of workers and construction equipment on road work sites.

These Barriers once joined at their ends to form a complete system and water filled will provide a ballast against movement.

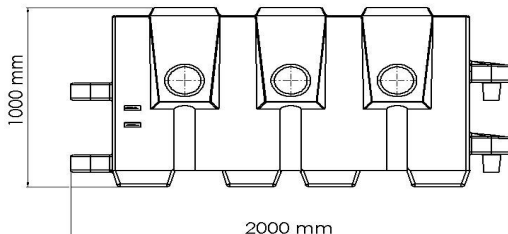

Each Barrier has a carrying capacity of 300 litres when filled with water to the recommended level.

Manufactured from virgin UV-Stabilized Polyethylene available in colours of your choice : Yellow, White, Red.

MKI Dimensions :

MKII Dimensions :

The product is protected by a South-African patent. "Patent # 93/6437"
